

annual progress report

2009

LIGHTWEIGHTING
MATERIALS

DEPARTMENT OF
ENERGY

Energy Efficiency &
Renewable Energy

Contents

1. Introduction

Introduction.....	1-1
-------------------	-----

2. Automotive Metals - Wrought

A. Thermomechanical Processing Design for Lightweight Materials.....	2-1
B. Development of High-Volume Warm Forming of Low-Cost Magnesium Sheet.....	2-63
C. Electromagnetic Forming of Aluminum Sheet.....	2-74
D. Pulse Pressure Forming of Lightweight Materials.....	2-79
E. Formability of Continuous Cast Magnesium Sheet.....	2-87
F. Development of High-Strength Superplastic Forming Aluminum Sheet for Automotive Applications.....	2-96
G. Aluminum Automotive Closure Panel Corrosion Test Program.....	2-104

3. Automotive Metals - Cast

A. Improved Automotive Suspension Components Cast with B206 Alloy.....	3-1
B. Magnesium Powertrain Cast Components.....	3-10
C. High Integrity Magnesium Automotive Castings.....	3-20
D. Casting/Solidification of Magnesium Alloys.....	3-27
E. Multi-material Metallurgical Bond Joining to Steel.....	3-38
F. Corrosion of Magnesium Alloy.....	3-47
G. Nano-Engineered Cast Components (NECC) Phase 1: Elevated Temperature Mechanical Property Testing and Cost Model Development.....	3-58

4. Automotive Metals - Titanium

A. Low-Cost Titanium Powder for Feedstock.....	4-1
B. Production of Heavy Vehicle Components from Low-Cost Titanium Powder.....	4-10
C. Powder-Metal Performance Modeling of Automotive Components.....	4-25

5. Automotive Metals - Steel

A. High-Strength Steel Joining Technologies.....	5-1
B. Hydroforming Materials and Lubricants.....	5-8
C. Sheet Steel Fatigue Characteristics.....	5-16
D. Tribology.....	5-24
E. Advanced High-Strength Steel Stamping.....	5-31
F. Strain-Rate Characterization.....	5-40
G. Future Generation Passenger Compartment—Validation.....	5-50
H. Lightweight Rear Chassis Structure.....	5-61
I. Characterization of Thermomechanical Behaviors of Advanced High-Strength Steels (AHSSs): Formability, Weldability, and Performance Evaluations of AHSS.....	5-65
J. Characterization of Thermomechanical Behavior of Advanced High-Strength Steels (AHSSs): Task 2—Weldability and Performance Evaluations of AHSS.....	5-78
K. Fundamental Study of the Relationship of Austenite-Ferrite Transformation to Austenite Retention in Carbon Steels.....	5-86
L. National Science Foundation Funding for the Development of Third Generation Advanced High-Strength Steels.....	5-92
M. A Multiresolution Analysis of the Particle Size and Interface Effects on the Strength and Ductility of Advanced High-Strength Steels.....	5-96
N. Study of the Effects of Microstructure on the Mechanical Properties and Failure Mechanisms of Advanced High-Strength Steels.....	5-103
O. Development of Novel Finite-Element Simulation Tools that Implement Crystal-Plasticity Constitutive Theories Using an Efficient Spectral Framework.....	5-115
P. Advanced High-Strength Steel through Paraequilibrium Carbon Partitioning and Austenite Stabilization.....	5-126
Q. Development of a High-Strength, High-Toughness Bainitic Steel.....	5-138
R. Development of Nano-Acicular Duplex Steels.....	5-144
S. Sheet Formability and Springback of Advanced High-Strength Steels.....	5-150
T. Sheet Formability and Springback of Advanced High-Strength Steels.....	5-159
U. Materials Design For Steel Alloys.....	5-168
V. Nonlinear Strain Paths Project.....	5-178
W. Lightweight Front Suspension.....	5-181
X. Precision Flow Form Application Development.....	5-185

6. Automotive Metals - Croscutting

A. Magnesium Research and Technology Development.....	6-1
B. Magnesium Front-End Design and Development.....	6-7
C. Magnesium Front End Research and Development.....	6-18

D. High-Strain-Rate Characterization of Magnesium Alloys.....	6-32
E. High-Rate Damage and Fracture, Experimentation, Simulation, and Visualization.....	6-43
F. Integrated Computational Materials Engineering for Magnesium in Body Applications (Mg ICME).....	6-51
G. Multiscale Microstructure-Property Plasticity Considering Uncertainty.....	6-63
H. Materials Design for Magnesium Alloys.....	6-74
I. High Throughput Isotopic Diffusion Databases for Integrated Computational Materials Engineering.....	6-88
J. Cyberinfrastructure.....	6-98
K. Simulation-Based Design Optimization.....	6-108
L. Fatigue of Lightweight Automotive Materials.....	6-120
M. Modified LENS Process for Controlled Net Shaping-Induced Local Microstructure and Properties.....	6-130

7. Low-Cost Carbon Fiber

A. Low-Cost Carbon Fibers from Renewable Resources.....	7-1
B. Advanced Oxidative Stabilization of Carbon Fiber Precursors.....	7-9
C. Precursor and Fiber Evaluation.....	7-20
D. Commercialization of Textile Precursors.....	7-25
E. Commercialization of Low-cost Carbon Fiber Composites and Carbon Fiber Precursors.....	7-33
F. Carbon Fiber Precursors from Polyolefins.....	7-41
G. Conventional Interfacial Optimization of Reinforcement Fibers for Polymeric Systems.....	7-48

8. Polymer Composites Research and Development

A. Automotive Composites Consortium Focal Project 4.....	8-1
B. Composite Underbody Attachment.....	8-17
C. Development of Next-Generation Programmable Preforming Process.....	8-30
D. High Volume Processing of Composites.....	8-41
E. Natural Fiber Composite Retting, Preform, Manufacture, and Molding.....	8-54
F. Natural Fiber Composites for Structural Component Design.....	8-66
G. Evaluation of Composite Natural Fiber/Resin Compatibility.....	8-77
H. Composite Crash Energy Management.....	8-86
I. Development of Standardized Test Methods for Crashworthiness of Composites.....	8-101
J. Engineering Property Prediction Tools for Tailored Polymer Composite Structures.....	8-105
K. Simulating Injection Molding of Thermoplastics Reinforced with Short and Long Fibers.....	8-118
L. Structural Nanocomposite Design.....	8-127

9. Joining

A. Forming Limits of Weld Metal in Aluminum Alloys and Advanced High-Strength Steels.....	9-1
B. Impact Modeling and Characterization of Spot Welds (DYNAMIC CHAR OF SPOT WELDS IN AHSS).....	9-8
C. Friction Stir Spot Welding of Advanced High-Strength Steel.....	9-20
D. Friction Stir and Ultrasonic Solid State Joining Magnesium to Steel.....	9-27
E. Friction Bit Joining—An Innovation in Dissimilar Metal Joining.....	9-38
F. Weld Element and Joining Process Technology Development.....	9-53
G. Joining Strategy Steering Committee.....	9-67
H. Development of Steel Fastener Nano-Ceramic Coatings for Corrosion Protection of Magnesium Parts.....	9-71

10. Nondestructive Evaluation

A. Nondestructive Inspection of Adhesive Metal-Metal Bonds.....	10-1
B. Laser Ultrasonic Inspection of Adhesive Bonds Used in Automotive Body Assembly.....	10-12
C. Online Nondestructive Weld Quality Monitor and Control with Infrared Thermography.....	10-18
D. Enhanced Resonance Inspection for Light Metal Castings.....	10-29
E. Global Quality Assessment of Joining Technology for Automotive Body-in-White.....	10-37
F. Reliability Tools for Resonance Inspection of Light Metal Castings.....	10-45

11. Recycling

A. Development of Technology for Recycling Polymers from Shredder Residue.....	11-1
B. Development of High Speed Multispectral Imaging for Sorting Automotive Plastics.....	11-14

12. Materials Crosscutting Research and Development

A. Technical Cost Modeling.....	12-1
B. Mission Eggcellence—K-12 Outreach Program.....	12-9
C. Multi-Material Vehicle Research and Development Initiative.....	12-15
D. Lightweighting Materials, Designs, and Manufacturing Processes for Light Duty Vehicles.....	12-21

A. Acronyms and Abbreviations

Acronyms and Abbreviations.....	A-1
