NOTICE OF ALLOWANCE TO RESUME DISTRIBUTION

Issued: October 15, 2014

Manufacturers of certain covered products that the Department of Energy (DOE) has determined do not comply with an applicable water conservation standard may be allowed to resume distribution in commerce in the United States, as described in 10 C.F.R. § 429.114(d), if the manufacturer modifies the basic model in such a manner as to make it comply with the applicable standards. On July 30, 2014, DOE issued a Notice of Noncompliance Determination, based on enforcement testing, for the basic model that includes Harrington Creations, LLC d/b/a Harrington Brass Works (“Harrington”) kitchen faucet individual model 20-210-026.

Harrington has informed DOE that it has modified this basic model, now listed as 20-210A-xxx and containing individual models 20-210A-xxx and 20-211A-xxx, and provided test results for the modified product, performed by a third party laboratory, indicating that the modified model complies with the applicable water conservation standards.

Based on the test data for the modified basic model, DOE has determined that the new basic model appears to comply with the applicable water conservation standards and is a suitable replacement for the noncompliant model. As such, the company may distribute individual models 20-210A-xxx and 20-211A-xxx, where the last three digits indicate variations in finishes. Harrington must maintain records that demonstrate that modifications have been made to all units of the new basic model prior to distribution in commerce. Unmodified units of the basic model that includes individual model 20-210-026 may not be distributed in commerce in the U.S.
