**U.S. DEPARTMENT OF ENERGY
OFFICE OF ENERGY EFFICIENCY AND RENEWABLE ENERGY
NEPA DETERMINATION**

RECIPIENT: French Development Enterprises, LLC

STATE: MA

PROJECT TITLE: The French Modular Impoundment

| | | | |
|--|--------------------------------------|----------------------------|-------------------|
| Funding Opportunity Announcement Number | Procurement Instrument Number | NEPA Control Number | CID Number |

Based on my review of the information concerning the proposed action, as NEPA Compliance Officer (authorized under DOE Order 451.1A), I have made the following determination:

CX, EA, EIS APPENDIX AND NUMBER:

Description:

- A9 Information gathering, analysis, and dissemination** Information gathering (including, but not limited to, literature surveys, inventories, site visits, and audits), data analysis (including, but not limited to, computer modeling), document preparation (including, but not limited to, conceptual design, feasibility studies, and analytical energy supply and demand studies), and information dissemination (including, but not limited to, document publication and distribution, and classroom training and informational programs), but not including site characterization or environmental monitoring. (See also B3.1 of appendix B to this subpart.)
- B3.6 Small-scale research and development, laboratory operations, and pilot projects** Siting, construction, modification, operation, and decommissioning of facilities for smallscale research and development projects; conventional laboratory operations (such as preparation of chemical standards and sample analysis); and small-scale pilot projects (generally less than 2 years) frequently conducted to verify a concept before demonstration actions, provided that construction or modification would be within or contiguous to a previously disturbed or developed area (where active utilities and currently used roads are readily accessible). Not included in this category are demonstration actions, meaning actions that are undertaken at a scale to show whether a technology would be viable on a larger scale and suitable for commercial deployment.

Rationale for determination:

The U.S. Department of Energy (DOE) is proposing to provide federal funding to French Development Enterprises, LLC to design, manufacture and test a prototype, small scale, precast modular dam as well as design a full-scale dam to compare the resulting engineering and cost estimates with traditional dam construction methods.

Proposed project activities would include the design, fabrication and laboratory testing of precast modular dam technology for construction and retrofit of small- and medium-head hydropower projects. Design and fabrication activities would take place at the Oldcastle Precast facility in Rehoboth, MA and Avon, CT. Once manufactured, the small scale dam segments would be delivered to Alden Labs in Holden, MA. They would be placed in an existing, indoor, 100 foot by 10 foot by 20 foot test tank at the Alden Labs facility. The prototype dam would be 26 feet in length with six modules and supporting buttresses and abutment walls. The prototype would be placed in, and seal off half of, the tank, and water would be added to test seepage between adjoining modules. Water used for tank testing would be re-circulated in a closed loop. The assembly and disassembly of the dam would be closely reviewed and monitored to evaluate ability and ease of installation and removal. Testing would involve qualitative investigations with dye to find sources of any leakage in the dam. Remedies for sources of leakage would be evaluated, including potential sealing material or new bolting configurations.

Fabricating the modular segments at Oldcastle would be subject to standard safety considerations as outlined in the company's safety procedures in accordance with Federal, state, and local regulations. Assembly and installation of the proposed dam at the Alden facility would involve operating heavy machinery, working with various hazardous materials, and conducting tests in both high- and low-water-pressure environments. All work would be performed by licensed personnel under supervision of Alden staff. The facilities in which lab work would occur are purpose-built for the type of activities being proposed; therefore, no adverse impacts to sensitive resources are expected as a result of the proposed project. No change in the use, mission or operation of existing facilities would arise out of this effort. The proposed laboratories and facilities would comply with standard safety procedures and all processes and procedures would be monitored by the Environmental Health and Safety staff. The proposed laboratories and facilities have all applicable permits in place, and would not need additional permits for the proposed activities. All handling and disposal of waste materials would comply with appropriate local, state and Federal regulations.

Based on review of the project information and the above analysis, DOE has determined that the proposed project would not have a significant individual or cumulative impact to human health and/or environment. DOE has determined the proposed project is consistent with actions contained in DOE categorical exclusions A9 "information gathering, analysis and dissemination," and B3.6 "small-scale research and development, laboratory operations and pilot projects" and is categorically excluded from further NEPA review.

NEPA PROVISION

DOE has made a final NEPA determination for this award

Insert the following language in the award:

If you intend to make changes to the scope or objective of your project you are required to contact the Project Officer identified in Block 11 of the Notice of Financial Assistance Award before proceeding. You must receive notification of approval from the DOE Contracting Officer prior to commencing with work beyond that currently approved.

Note to Specialist :

Wind and Water Power Technologies Office
This NEPA determination does not require a tailored NEPA provision.
Review completed by Logan Sholar on 12/3/2015

SIGNATURE OF THIS MEMORANDUM CONSTITUTES A RECORD OF THIS DECISION.

FIELD OFFICE MANAGER DETERMINATION

Field Office Manager review required

NCO REQUESTS THE FIELD OFFICE MANAGER REVIEW FOR THE FOLLOWING REASON:

- Proposed action fits within a categorical exclusion but involves a high profile or controversial issue that warrants Field Office Manager's attention.
- Proposed action falls within an EA or EIS category and therefore requires Field Office Manager's review and determination.

BASED ON MY REVIEW I CONCUR WITH THE DETERMINATION OF THE NCO :

Field Office Manager's Signature: _____ Date: _____
Field Office Manager
