EnPI 5.1 Known Issues

1. If the calculate button fails to run the program, check the variable names to ensure that they are appropriate (e.g., no returns in column headers, etc.).
2. If cannot switch model:
   a. Use the "Change Model" functionality to "change" the model to the version that is currently displayed within the results sheets
   b. Save your work (in all open Excel Workbooks)
   c. Close Excel
   d. Open Task Manager
   e. Navigate to the "Details" Tab
   f. Locate and select EXCEL.EXE and end task
      i. NOTE: this will force close all running Excel windows. All instances of Excel need to be closed
   g. Reopen the file and change the model per normal method
3. If cannot switch model (manual override option):
   a. Copy the desired equation and paste in to the appropriate Modeled energy column within the Model tabs
4. If the tool is run in Office 2013, the wizard may flash once when first opened.
