

United States Department of Energy

Project Management Achievement Award

Presented to

The Office of Science's Utilities Infrastructure Modernization Project

The Utilities Infrastructure Modernization (UIM) project provided critical upgrades to the infrastructure systems at Thomas Jefferson National Accelerator Facility in Newport News, Virginia. The \$30 million project featured the accelerator site electrical distribution system, accelerator and cryogenic system cooling towers, expansion of the chiller plant, expansion of the cryogenic capacity, a greatly enhanced fiber communication systems, and data center cooling and power. The success of the UIM project is credited to the experienced and dedicated project team.
