

Federal Energy and Water Management AWARDS

2013

2012 GSA NCR Energy Branch from left to right; Brian Shaffer, Amy Hudson, Ron Allard, Joe Eberly

Ronald Allard, Joseph Eberly Amy Hudson, James B. Shaffer U.S. General Services Administration, National Capital Region Regional Energy and Sustainability Branch Washington, DC

The newly reformed Regional Energy and Sustainability Branch of GSA's National Capital Region supports 95.6 million rentable square feet of space in 190 Federally-owned buildings. The Branch is responsible for writing energy and water saving policies and procedures and overseeing their implementation; tracking effects on regional energy and water efficiency; performing energy audits; and coordinating energy and water efficiency projects throughout the region. In FY 2012 the Region's energy and water intensity improved by 9 percent and 6 percent respectively from the prior year, with utility cost savings of more than \$10 million.

The Branch realized savings by implementing multiple projects over the past two years, including a new regional energy policy; a monthly energy newsletter; a robust energy audit program; energy efficiency rebates; energy savings performance contracting guidance; a solar renewable energy credit sale program; Energy Star certification; a Leadership in Energy and Environmental Design (LEED) certification program for existing buildings; and an incentivized energy funding account. In addition to the day-to-day efforts of the small expert team, these programs were accomplished at an investment cost of only \$30,000.
