INTRODUCTION	1
1.1 BACKGROUND	1
1.1.1. The Importance of Energy Efficiency in U.S. Manufacturing	1
1.1.2. Focus and Goals of this Report	2
1.2 METHODOLOGY	2
1.2.1. Scope of Footprint Analysis	2
1.2.2. Source Data and Adjustments	3
1.2.3. Carbon Footprint Analysis	4
1.2.4. A Walkthrough of the Footprints	4
1.2.5. Applying Footprint Results	9
ENERGY AND GREENHOUSE GAS COMBUSTION EMISSIONS PROFILES	11
2.1 U.S. MANUFACTURING (NAICS 31–33)	11
2.1.1. Overview of U.S. Manufacturing	11
2.1.2. Energy Use Profile for U.S. Manufacturing and Sector Rankings	11
2.1.3. Greenhouse Gas Combustion Emissions Profile for U.S. Manufacturing and Sector Rankings	35
2.1.4. Energy and Emissions Profile Summary Table	38
2.2 CHEMICALS SECTOR (NAICS 325)	39
2.2.1. Overview of the Chemicals Manufacturing Sector	39
2.2.2. Energy Use Profile for the Chemicals Sector	39
2.2.3. Greenhouse Gas Combustion Emissions Profile for the Chemicals Sector	51
2.2.4. Energy and Emissions Profile Summary Table	53
2.3 FOREST PRODUCTS SECTOR (NAICS 321 AND 322)	54
2.3.1. Overview of the Forest Products Manufacturing Sector	54
2.3.2. Energy Use Profile for the Forest Products Sector	54
2.3.3. Greenhouse Gas Combustion Emissions Profile for the Forest Products Sector	66
2.3.4. Energy and Emissions Profile Summary Table	68
2.4 PETROLEUM REFINING SECTOR (NAICS 324110)	69
2.4.1. Overview of the Petroleum Refining Manufacturing Sector	69
2.4.2. Energy Use Profile for the Petroleum Refining Sector	69
2.4.3. Greenhouse Gas Combustion Emissions Profile for the Petroleum Refining Sector	81
2.4.4. Energy and Emissions Profile Summary Table	83

2.5	FOOD AND BEVERAGE SECTOR (NAICS 311 AND 312).....	84
2.5.1.	Overview of the Food and Beverage Manufacturing Sector.....	84
2.5.2.	Energy Use Profile for the Food and Beverage Sector	84
2.5.3.	Greenhouse Gas Combustion Emissions Profile for the Food and Beverage Sector	96
2.5.4.	Energy and Emissions Profile Summary Table	98
2.6	IRON AND STEEL SECTOR (NAICS 3311, 3312).....	99
2.6.1.	Overview of the Iron and Steel Manufacturing Sector	99
2.6.2.	Energy Use Profile for the Iron and Steel Sector	99
2.6.3.	Greenhouse Gas Combustion Emissions Profile for the Iron and Steel Sector.....	111
2.6.4.	Energy and Emissions Profile Summary Table	113
	REFERENCES	114
	Appendix A. GLOSSARY	A-3
	Appendix B. FOOTPRINTS SCOPE AND SECTOR DESCRIPTIONS	B-3
	Appendix C. FOOTPRINTS BY SECTOR	C-3
	Appendix D. FOOTPRINT ASSUMPTIONS AND DATA ADJUSTMENTS	D-3
	Appendix E. ALLOCATION OF STEAM TO PROCESS AND NONPROCESS END USES	E-3
	Appendix F. ESTIMATION OF PROCESS HEATING ENERGY LOSS	F-3

LIST OF FIGURES

Figure		Page
1.1-1	2006 U.S. energy consumption [EIA 2010a]	1
1.2-1	Footprint legend	4
1.2-2	Total primary energy use and GHG combustion emissions for the chemicals sector	5
1.2-3	Onsite energy and carbon emissions for the chemicals sector	6
1.2-4	Energy profile terminology guide	9
2.1-1	Feedstock energy use in U.S. manufacturing	12
2.1-2	U.S. manufacturing total primary and feedstock energy	13
2.1-3	Total energy and carbon footprint for U.S. manufacturing	14
2.1-4	Onsite energy and carbon footprint for U.S. manufacturing	15
2.1-5	Primary energy use by energy type for U.S. manufacturing	16
2.1-6	Offsite energy supply for U.S. manufacturing	18
2.1-7	Offsite fuel, electricity, and steam supply by manufacturing sector	19
2.1-8	Fuel use and type by manufacturing sector	21
2.1-9	Electricity generation and <i>direct</i> end use in U.S. manufacturing	22
2.1-10	Steam generation and <i>direct</i> end use in U.S. manufacturing.....	24
2.1-11	CHP fuel consumption and energy output in U.S. manufacturing	27
2.1-12	Primary energy by type at <i>direct</i> end use in U.S. manufacturing.....	28
2.1-13	Primary energy by <i>direct</i> end use in U.S. manufacturing	29
2.1-14	Primary energy use and applied energy by energy type for U.S. manufacturing	32
2.1-15	Primary energy by loss and applied energy in U.S. manufacturing	33
2.1-16	Primary applied energy by <i>direct</i> end use in U.S. manufacturing.....	34
2.1-17	Onsite and offsite GHG combustion emissions in U.S. manufacturing	35
2.1-18	Total GHG combustion emissions in U.S. manufacturing (shown by energy supply type).....	36
2.1-19	Total GHG combustion emissions in U.S. manufacturing (shown by energy end use type).....	36
2.1-20	Total GHG combustion emissions in U.S. manufacturing (shown by direct energy end use)	37
2.2-1	Feedstock energy use in the chemicals sector	40
2.2-2	Total energy and carbon footprint for the chemicals sector	41
2.2-3	Onsite energy and carbon footprint for the chemicals sector	42
2.2-4	Primary energy use by energy type in the chemicals sector.....	43
2.2-5	Offsite energy supply in the chemicals sector	44
2.2-6	Onsite energy use in selected chemicals subsectors	44
2.2-7	Electricity generation and <i>direct</i> end use in the chemicals sector	45
2.2-8	Steam generation and <i>direct</i> end use in the chemicals sector.....	46
2.2-9	CHP fuel consumption and energy output in the chemicals sector	47
2.2-10	Primary energy by type at <i>direct</i> end use in the chemicals sector.....	47
2.2-11	Primary energy by <i>direct</i> end use in the chemicals sector	48
2.2-12	Primary energy and applied energy by type in the chemicals sector.....	49
2.2-13	Primary energy by loss and applied energy in the chemicals sector	49
2.2-14	Primary applied energy by <i>direct</i> end use in the chemicals sector.....	50
2.2-15	Total GHG combustion emissions in the chemicals sector (shown by energy supply type).....	51
2.2-16	Total GHG combustion emissions in the chemicals sector (shown by energy end use type).....	52
2.2-17	Total GHG combustion emissions in the chemicals sector (shown by direct energy end use)	52

2.3-1	Feedstock energy use in the forest products sector	55
2.3-2	Total energy and carbon footprint for the forest products sector	56
2.3-3	Onsite energy and carbon footprint for the forest products sector	57
2.3-4	Primary energy use by energy type for the forest products sector	58
2.3-5	Offsite energy supply in the forest products sector	58
2.3-6	Onsite energy use in selected forest products subsectors	59
2.3-7	Electricity generation and <i>direct</i> end use in the forest products sector	60
2.3-8	Steam generation and <i>direct</i> end use in the forest products sector.....	61
2.3-9	CHP fuel consumption and energy output in the forest products sector	62
2.3-10	Primary energy by type at <i>direct</i> end use in the forest products sector.....	62
2.3-11	Primary energy by <i>direct</i> end use in the forest products sector.....	63
2.3-12	Primary energy use and applied energy by energy type in the forest products sector.....	64
2.3-13	Primary energy by loss and applied energy in the forest products sector	65
2.3-14	Primary applied energy by <i>direct</i> end use in the forest products sector.....	65
2.3-15	Total GHG combustion emissions in the forest products sector (shown by energy supply type).....	66
2.3-16	Total GHG combustion emissions in the forest products sector (shown by energy end use type).....	67
2.3-17	Total GHG combustion emissions in the forest products sector (shown by direct energy end use).....	67
2.4-1	Feedstock energy use in the petroleum refining sector	70
2.4-2	Total energy and carbon footprint for the petroleum refining sector	71
2.4-3	Onsite energy and carbon footprint for the petroleum refining sector	72
2.4-4	Primary energy by energy type in the petroleum refining sector	73
2.4-5	Offsite energy supply in the petroleum refining sector	74
2.4-6	Electricity generation and <i>direct</i> end use in the petroleum refining sector	75
2.4-7	Steam generation and <i>direct</i> end use in the petroleum refining sector.....	76
2.4-8	CHP fuel consumption and energy output in the petroleum refining sector	77
2.4-9	Primary energy by type at <i>direct</i> end use in the petroleum refining sector	77
2.4-10	Primary energy by <i>direct</i> end use in the petroleum refining sector.....	78
2.4-11	Primary energy and applied energy by energy type in the petroleum refining sector	79
2.4-12	Primary energy by loss and applied energy in the petroleum refining sector	80
2.4-13	Primary applied energy by <i>direct</i> end use in the petroleum refining sector	80
2.4-14	Total GHG combustion emissions in the petroleum refining sector (shown by energy supply type)	81
2.4-15	Total GHG combustion emissions in the petroleum refining sector (shown by energy end use type).....	82
2.4-16	Total GHG combustion emissions in the petroleum refining sector (shown by direct energy end use).....	82
2.5-1	Feedstock energy use in the food and beverage sector.....	85
2.5-2	Total energy and carbon footprint for the food and beverage sector.....	86
2.5-3	Onsite energy and carbon footprint for the food and beverage sector.....	87
2.5-4	Primary energy by energy type in the food and beverage sector.....	88
2.5-5	Offsite energy supply in the food and beverage sector	89
2.5-6	Onsite energy use in selected food and beverage subsectors	89
2.5-7	Electricity generation and <i>direct</i> end use in the food and beverage sector	90
2.5-8	Steam generation and <i>direct</i> end use in the food and beverage sector	91
2.5-9	CHP fuel consumption and energy output in the food and beverage sector.....	92
2.5-10	Primary energy by type at <i>direct</i> end use in the food and beverage sector	92
2.5-11	Primary energy by <i>direct</i> end use in the food and beverage sector	93
2.5-12	Primary energy and applied energy by energy type in the food and beverage sector	94
2.5-13	Primary energy by loss and applied energy in the food and beverage sector	95
2.5-14	Primary applied energy by <i>direct</i> end use in the food and beverage sector	95

2.5-15	Total GHG combustion emissions in the food and beverage sector (shown by energy supply type).....	96
2.5-16	Total GHG combustion emissions in the food and beverage sector (shown by energy end use type).....	97
2.5-17	Total GHG combustion emissions in the food and beverage sector (shown by direct energy end use).....	97
2.6-1	Feedstock energy use in the iron and steel sector.....	100
2.6-2	Total energy and carbon footprint for the iron and steel sector.....	101
2.6-3	Onsite energy and carbon footprint for the iron and steel sector.....	102
2.6-4	Primary energy by energy type in the iron and steel sector.....	103
2.6-5	Offsite energy supply in the iron and steel sector	104
2.6-6	Onsite energy use in selected iron and steel subsectors	104
2.6-7	Electricity generation and <i>direct</i> end use in the iron and steel sector	105
2.6-8	Steam generation and <i>direct</i> end use in the iron and steel sector	106
2.6-9	CHP fuel consumption and energy output in the iron and steel sector.....	107
2.6-10	Primary energy by type at <i>direct</i> end use in the iron and steel sector	107
2.6-11	Primary energy by <i>direct</i> end use in the iron and steel sector	108
2.6-12	Primary energy and applied energy by energy type in the iron and steel sector	109
2.6-13	Primary energy by loss and applied energy in the iron and steel sector.....	109
2.6-14	Primary applied energy by <i>direct</i> end use in the iron and steel sector	110
2.6-15	Total GHG combustion emissions in the iron and steel sector (shown by energy supply type).....	111
2.6-16	Total GHG combustion emissions in the iron and steel sector (shown by energy end use type)	112
2.6-17	Total GHG combustion emissions in the iron and steel sector (shown by direct energy end use)	112
E.1	Manufacturing energy and carbon footprint for U.S. manufacturing – total energy	E-4
E.2	Manufacturing energy and carbon footprint for U.S. manufacturing – onsite energy	E-4
E.3	Steam end use values evaluated by steam working group.....	E-6
E.4	Survey respondents by employer category	E-7
E.5	Number of survey respondents for 15 individual sectors	E-8
F.1	Manufacturing energy and carbon footprint for U.S. manufacturing – total energy	F-4
F.2	Manufacturing energy and carbon footprint for U.S. manufacturing – onsite energy	F-4
F.3	Process heating energy loss value evaluated by the process heating working group	F-6
F.4	Simplified process heating equipment energy balance (as derived from <i>Improving Process Heating System Performance: A Sourcebook for Industry</i> , Figure 2, Page 13).....	F-9

LIST OF TABLES

Table		Page
1.2-1	Manufacturing sectors selected for analysis.....	3
1.2-2	Manufacturing energy footprint loss assumptions.....	7
1.2-3	Steam allocation assumptions	8
2.1-1	Snapshot of energy use and loss within U.S. manufacturing	11
2.1-2	U.S. manufacturing sector rank by primary energy use	17
2.1-3	Offsite energy supply by U.S. manufacturing sector.....	19
2.1-4	Offsite energy supply distribution	20
2.1-5	U.S. manufacturing sectors ranked by fuel use (<i>indirect</i> and <i>direct end use</i>)	21
2.1-6	U.S. manufacturing sectors ranked by electricity use (<i>direct end use</i>)	23
2.1-7	U.S. manufacturing sectors ranked by steam use (<i>direct end use</i>)	25
2.1-8	Steam end-use equipment in energy-intensive industries [AMO EERE 2012b].....	26
2.1-9	U.S. manufacturing sectors ranked by onsite steam and electricity generation, TBtu	27
2.1-10	U.S. manufacturing sectors ranked by CHP fuel use and output, TBtu	28
2.1-11	U.S. manufacturing sectors ranked by process heating energy	30
2.1-12	U.S. manufacturing sectors ranked by process cooling energy	30
2.1-13	U.S. manufacturing sectors ranked by machine drive energy	31
2.1-14	U.S. manufacturing sectors ranked by nonprocess energy	31
2.1-15	U.S. manufacturing sectors ranked by applied energy	33
2.1-16	U.S. manufacturing sectors ranked by total GHG combustion emissions.....	37
2.1-17	Energy use, loss, and GHG combustion emissions in U.S. manufacturing.....	38
2.2-1	Chemicals subsectors with data reported in MECS	39
2.2-2	Snapshot and ranking of energy use, loss, and GHG combustion emissions in the chemicals sector	40
2.2-3	Energy use, loss, and GHG combustion emissions in the chemicals sector.....	53
2.3-1	Forest products subsectors with data reported in MECS.....	54
2.3-2	Snapshot of the forest products sector: energy use and rank within U.S. manufacturing	55
2.3-3	Energy use, loss, and GHG combustion emissions in the forest products sector.....	68
2.4-1	Snapshot of the petroleum refining sector: Energy use and rank within U.S. manufacturing.....	69
2.4-2	Energy use, loss, and GHG combustion emissions in the petroleum refining sector	83
2.5-1	Food and beverage subsectors with data reported in MECS	84
2.5-2	Snapshot of the food and beverage sector: Energy use and rank within U.S. manufacturing.....	85
2.5-3	Energy use, loss, and GHG combustion emissions in the food and beverage sector	98
2.6-1	Iron and steel subsectors with data reported in MECS.....	99
2.6-2	Snapshot of the iron and steel sector: Energy use and rank within U.S. manufacturing	100
2.6-3	Energy use, loss, and GHG combustion emissions in the iron and steel sector	113
B.1	Manufacturing sectors selected for analysis.....	B-3
D.1	Manufacturing energy footprint loss assumptions.....	D-3
D.2	CHP efficiency by sector.....	D-4
D.3	Process heating loss assumptions by sector.....	D-4
D.4	Steam allocation assumptions by sector.....	D-5
D.5	Fuel GHG combustion emission factors (kg CO ₂ e per million Btu).....	D-6
E.1	Steam end use working group organizations	E-5
E.2	Weighing of survey responses.....	E-8
E.3	Results for steam allocation from the manufacturing steam end use working group.....	E-9
E.4	Manufacturing sector NAICS codes and net steam use	E-11
F.1	Process heating energy loss working group organizations.....	F-5

F.2	Alternative analysis approaches considered by Energetics	F-7
F.3	Contributing manufacturing organizations	F-8
F.4	Simplified process heating energy balance loss areas explained	F-9
F.5	Results for process heating energy loss from the manufacturing process heating energy loss working group	F-11
F.6	Sources consulted in estimating process heating energy loss.....	F-11

ACKNOWLEDGEMENTS

This report was prepared by Sabine Brueske, Ridah Sabouni, Chris Zach, and Howard Andres of Energetics Incorporated, with valuable contributions from many others. Energetics Incorporated is a consulting firm headquartered in Columbia, MD.

The authors gratefully acknowledge the many individuals and organizations that contributed to this project. In particular, we would like to express our gratitude to the following individuals, who dedicated significant time and attention to reviewing the report and/or contributing to specific analysis topics:

Isaac Chan U.S. DOE, AMO	Bob Adler, Energy Information Administration
Steve Sikirica U.S. DOE, AMO	Tom Lorenz, Energy Information Administration
Paul Scheihing U.S. DOE, AMO	Sachin Nimbalkar Oak Ridge National Laboratory
Bob Gemmer U.S. DOE, AMO	Thomas Wenning, Oak Ridge National Laboratory
Arvind Thekdi, E3M	Michaela Martin, Oak Ridge National Laboratory
Jimmy Kumana, Kumana and Associates	Patti Garland Oak Ridge National Laboratory

We would also like to recognize the following organizations for their contributions to the industry peer reviews that were conducted in support of this analysis. These organizations were not asked to contribute to the report as a whole, but rather to provide insights on specific peer review topics:

Advanced Energy	Diamond Engineering	Lawrence Berkeley National Laboratory
Alcoa	Dick Reese and Associates	Northwestern University
Alzeta	Didion Dry Corn Milling	Oak Ridge National Laboratory
ArcelorMittal	Dow Chemical Company	Phillips 66
Armstrong International	Duke Energy	Saint-Gobain
Briggs & Stratton	E3M	Shell
CHT Analytics	Energy Information Administration	Southern Company
Carus Corporation	Foster Farms	Spreckels Sugar
Council of Industrial Boiler Owners	Hauck Manufacturing	Spirax Sarco
Darigold	Hilmar Cheese Company	Tenova Core
Davisco Foods	Karl Dungs Inc.	
Del Mar Food Products	Kumana and Associates	

Sachin Nimbalkar of Oak Ridge National Laboratory provided general direction for this project, with the sponsorship of the Advanced Manufacturing Office (AMO), U.S. Department of Energy (DOE). This report provides an introduction to and analysis of the [Manufacturing Energy and Carbon Footprints](#), which are posted on the U.S. DOE/AMO website.
