Subject: Radiation Deposits in Texas

To Whom It May Concern:

I write to oppose the transport and deposit of nuclear waste in Texas or other state. The industry should be eliminated due to the danger it poses in its production and results. Radiation will last for 250,000 years. The genetic effect of radiation will destroy whole human gene pools in perpetuity. Fukushima medical studies have shown endemic and generational communication of Cesium, concentrating on the thyroid and increasing the likelihood of illness by thousands of per cent, compared to pre-nuclear radiation there. It is in the best interests of the population of the United States not to repeat this result in the United States--and finance it too.
