**Subject:** So-Called Interim Nuclear Storage Facilities

To Whom It May Concern:

Having these "interim" storage facilities before there are permanent storage facilities gives the illusion of a solution. Do we know for sure where even one permanent storage facility might be located?

Having private enterprise create and run these storage facilities and the transportation corridors necessary to get nuclear waste from the reactors to the facilities is a nightmare in the making. Already 90% of the reactors are in the East, and ALL the storage facilities are in the West, often on Tribal Land.

Nuclear Power IS NOT SAFE. Since Human Beings will always make mistakes, there is no way to keep such dangerous waste safe in transit & in storage for a MILLION YEARS !!!

As you can see I am not only opposed to these interim storage facilities, but I am opposed to nuclear power period. It has been and always will be a recipe for disaster.

Sincerely,

Jacqueline Wasilewski
