

Total cumulative net revenues reported for the emergency event are \$1,200,705,023.

Important caveats associated with this net revenue amount are as follows:

1. This is a preliminary estimate based on initial ERCOT settlement results. Some companies have reported that certain revenue and cost items are not yet reflected in their net revenue estimates since they have yet to be determined or invoiced. Examples cited include gas imbalance costs, gas delivery penalties, gas storage costs, ERCOT short payments, and potential repricing or resettlements.
2. For preliminary reporting, one company reported their gross revenues rather than net revenues, and these gross revenues are included in this preliminary total net revenue amount.
3. One company was not able to report net revenues on an hourly basis, so revenue values were reported on a daily basis instead.
4. Companies have until May 1, 2021, to report their net revenues based on ERCOT final settlement results and determination of other financial transactions that impact the net revenue estimates. The final net revenues will be reported to the U.S. DOE as soon as the company revenue reports are compiled by ERCOT.
