Project Title: Transfer of Effluent from HP-50 to ETP

Program or Field Office: Savannah River Site

Location(s) (City/County/State): Aiken/Aiken/South Carolina

Proposed Action or Project Description:

During routine sampling of HP-50 on 03/19/2022 by Savannah River Tritium Enterprise (SRTE), the pH of the effluent was identified as significantly lower than normal. Site Services installed a bladder pipe plug downstream of HP-50 and are currently holding an estimated 10,000 gallons of water upstream of the H-12 outfall. This water exceeds the ETP wastewater collection tank (WWCT) limits for nitrates, pH and alpha. A special waste compliance plan is being developed for transfer of this wastewater to ETP. The water will be transferred to a tanker trailer in 5,000 gallon batches where it will be sampled. ETP Engineering will approve each individual batch after sample results are received from the Liquid Waste Generator Representative (LWGR), allowing the water to be transferred to ETP via process sewer manhole 44A. Revision 0 of this EEC ONLY includes transfer of the effluent to the tanker trailer and sample collection/analysis. For Revision 1, the water will be directly pumped from the tanker to manhole 44A (P44) which leads directly to ETP.

Categorical Exclusion(s) Applied:

B6.1 - Cleanup actions

For the complete DOE National Environmental Policy Act regulations regarding categorical exclusions, including the full text of each categorical exclusion, see Subpart D of [10 CFR Part 1021](#).

- There are no extraordinary circumstances related to the proposal that may affect the significance of the environmental effects of the proposal.
- This proposal has not been segmented to meet the definition of a categorical exclusion. This proposal is not connected to other actions with potentially significant impacts (40 CFR 1508.25(a)(1)), is not related to other actions with individually insignificant but cumulatively significant impacts (40 CFR 1508.27(b)(7)), and is not precluded by 40 CFR 1506.1 or § 1021.211 concerning limitations on actions during preparation of an environmental impact statement.
- All of the conditions that are integral elements of the classes of actions in Appendix B to Subpart D of 10 CFR Part 1021 would be met. This proposal would not threaten a violation of applicable statutory, regulatory, or permit requirements for environment, safety, and health, or similar requirements of DOE or Executive Orders; require siting and construction or major expansion of waste storage, disposal, recovery, or treatment facilities (including incinerators), but the proposal may include categorically excluded waste storage, disposal, recovery, or treatment actions or facilities; disturb hazardous substances, pollutants, contaminants, or CERCLA-excluded petroleum and natural gas products that preexist in the environment such that there would be uncontrolled or unpermitted releases; have the potential to cause significant impacts on environmentally sensitive resources, including, but not limited to, those listed in paragraph B(4) of Appendix B to Subpart D of 10 CFR Part 1021; involve genetically engineered organisms, synthetic biology, governmentally designated noxious weeds, or invasive species, unless the proposed activity would be contained or confined in a manner designed and operated to prevent unauthorized release into the environment and conducted in accordance with applicable requirements.

Based on my review of information conveyed to me and in my possession (or attached) concerning the proposed action, as NEPA Compliance Officer (as authorized under DOE Order 451.1B), I have determined that the proposed action fits within the specified class(es) of action, the other regulatory requirements set forth above are met, and the proposed action is hereby categorically excluded from further NEPA review.
