Subject: Comment on LNG Export proposal
Date: Monday, February 09, 2015 12:48:29 PM

Hello

I just found out about this comment period today. So I think the public may not be aware, and I request that you extend the public comment period.

This proposal is not in the public interest for many reasons.

For me, the biggest reason is this: we need to stop putting all our eggs in the LNG and oil basket, and move toward diversifying into renewable resources. LNG is a potent greenhouse gas, and scientists worldwide warn that if we don't

decrease our use of these greenhouses gases we are in for devastating global warming impacts.

In the short run, I am also deeply concerned about the risks of transporting this gas across the Northeast. We are being asked to assume all the risk with none of the benefit.

Sincerely,

Catherine T Bertinuson
