I am writing to urge you NOT to approve the application by Pieridae Energy to use the M&N pipeline to export LNG. Should such routes open up, domestic natural gas will be taken out of the domestic market. This does not seem to be the proper use of land seized by eminent domain. My own property is being targeted by the NED pipeline and it would add insult to injury to know that what was taken "for the public good " was actually being used to drive profits from exporting. More importantly, the cumulative effects of exporting LNG will impact our climate, just at the time when we need to be shifting to renewable energy. Once again I urge you to deny this permission and at the very least, extend the deadline for comments so you can hear from more citizens.

Susan Secco
