

State of Alaska ENERGY SECTOR RISK PROFILE

This State Energy Risk Profile examines the relative magnitude of the risks that the State of Alaska’s energy infrastructure routinely encounters in comparison with the probable impacts. Natural and man-made hazards with the potential to cause disruption of the energy infrastructure are identified.

The Risk Profile highlights risk considerations relating to the electric, petroleum and natural gas infrastructures to become more aware of risks to these energy systems and assets.

ALASKA STATE FACTS

State Overview

Population: 0.74 million (<1% total U.S.)
Housing Units: 0.31 million (<1% total U.S.)
Business Establishments: 0.02 million (<1% total U.S.)

Annual Energy Consumption

Electric Power: 6.4 TWh (<1% total U.S.)
Coal: 400 MSTN (<1% total U.S.)
Natural Gas: 622 Bcf (3% total U.S.)
Motor Gasoline: 6,300 Mbarrels (<1% total U.S.)
Distillate Fuel: 13,200 Mbarrels (1% total U.S.)

Annual Energy Production

Electric Power Generation: 6.9 TWh (2% total U.S.)
Coal: 0.7 TWh, 10% [0.1 GW total capacity]
Petroleum: 1 TWh, 15% [0.7 GW total capacity]
Natural Gas: 3.6 TWh, 52% [1.0 GW total capacity]
Nuclear: 0 TWh, 0% [0 GW total capacity]
Hydro: 1.6 TWh, 23% [0.4 GW total capacity]
Other Renewable: 0.01 TWh, <1% [0.01 GW total capacity]

Coal: 2,100 MSTN (<1% total U.S.)
Natural Gas: 350 Bcf (1% total U.S.)
Crude Oil: 192,400 Mbarrels (8% total U.S.)
Ethanol: 0 Mbarrels (0% total U.S.)

NATURAL HAZARDS OVERVIEW

Annual Frequency of Occurrence of Natural Hazards in Alaska (1996–2014)

Annualized Property Loss due to Natural Hazards in Alaska (1996–2014)

- › According to NOAA, the most common natural hazard in Alaska is Earthquake (≥3.5 M), which occurs once every 2.5 days on the average.
- › The second-most common natural hazard in Alaska is Winter Storm & Extreme Cold, which occurs once every 4 days on the average during the months of October to March.

- › As reported by NOAA, the natural hazard in Alaska that caused the greatest overall property loss during 1996 to 2014 is Flood at \$10.3 million per year.
- › The natural hazard with the second-highest property loss in Alaska is Earthquake at \$2.6 million per year.

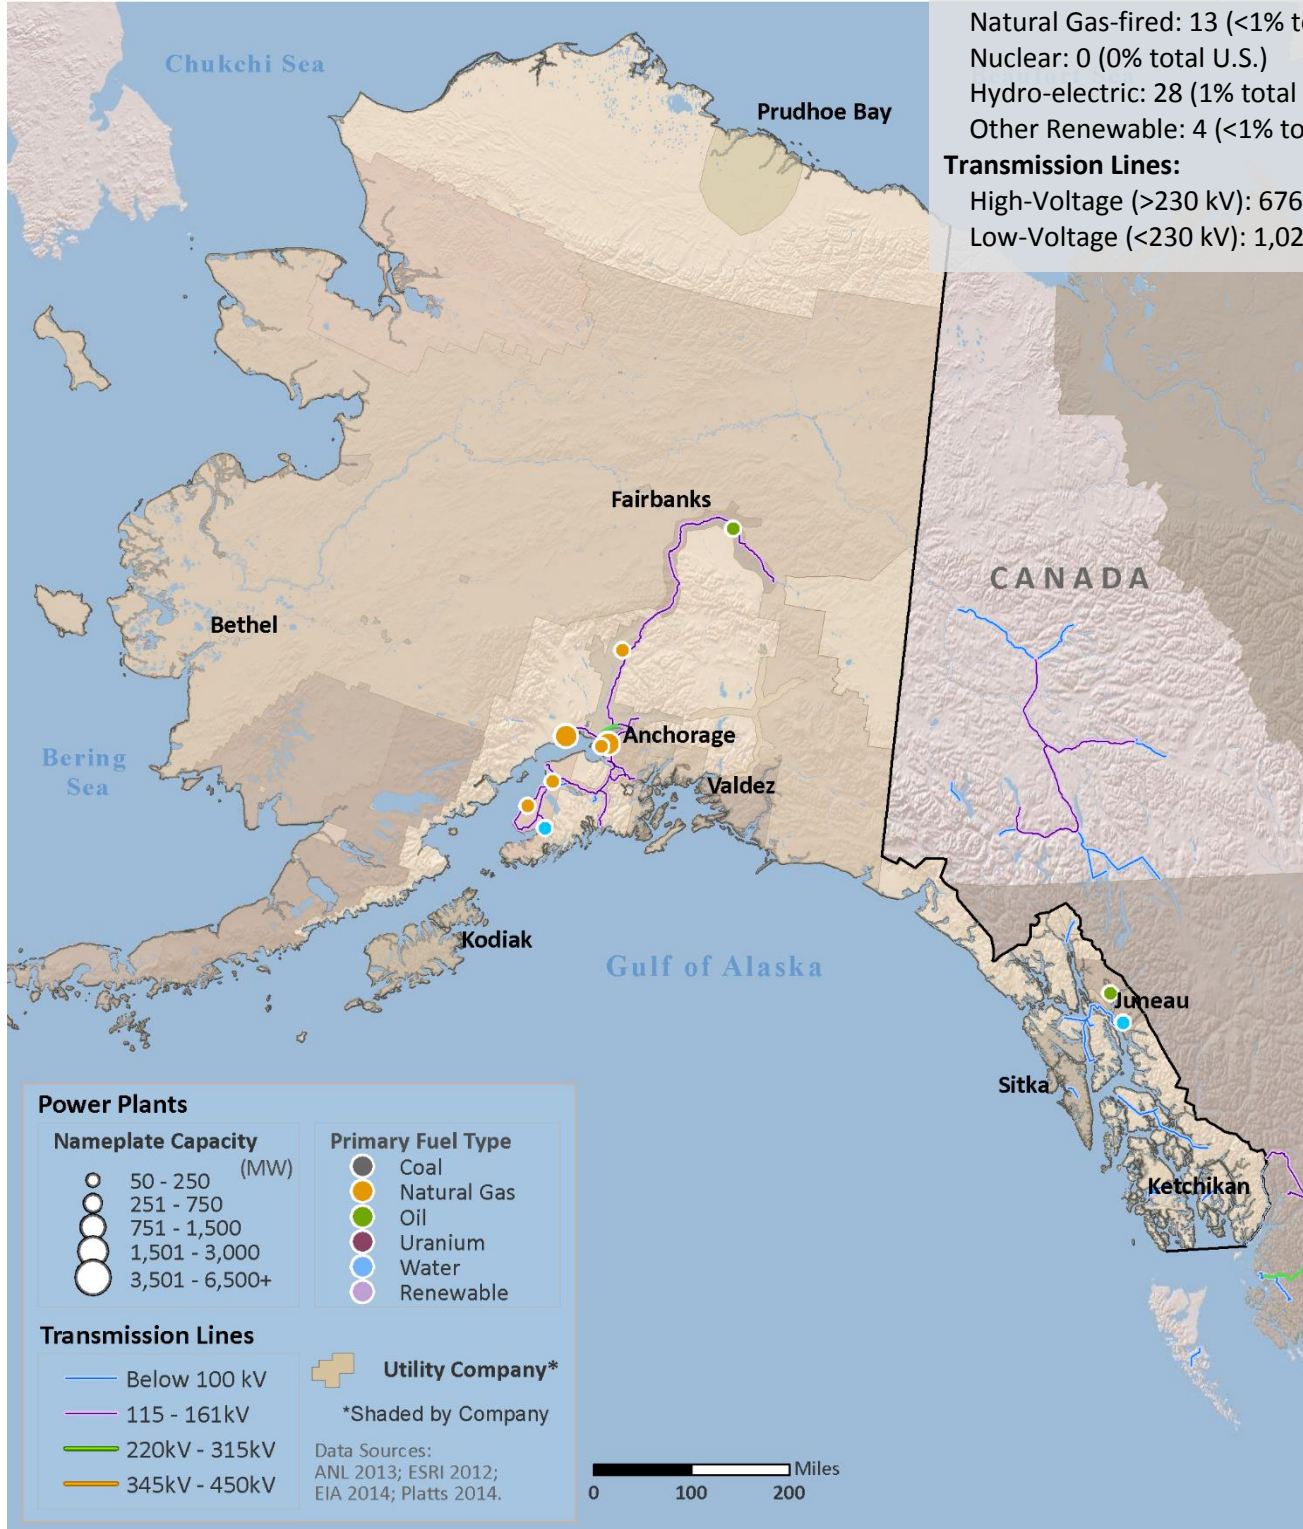

ELECTRIC

Electric Power Plants: 139 (1% total U.S.)

- Coal-fired: 5 (<1% total U.S.)
- Petroleum-fired: 89 (4% total U.S.)
- Natural Gas-fired: 13 (<1% total U.S.)
- Nuclear: 0 (0% total U.S.)
- Hydro-electric: 28 (1% total U.S.)
- Other Renewable: 4 (<1% total U.S.)

Transmission Lines:

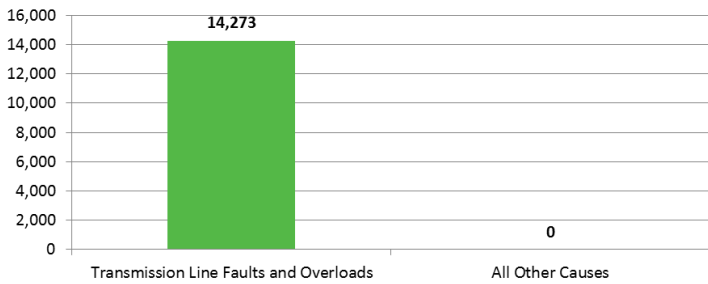

- High-Voltage (>230 kV): 676 Miles
- Low-Voltage (<230 kV): 1,021 Miles

Electric Transmission

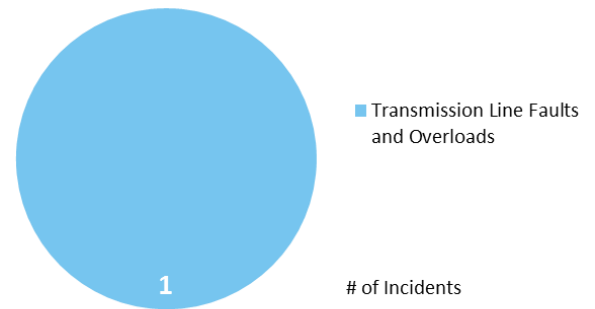

- › According to NERC, the leading cause of electric transmission outages in Alaska is **Transmission Line Faults and Overloads**
- › Alaska experienced **1 electric transmission outage** from 1992 to 2009, affecting a total of **14,273** electric customers.
- › **Transmission Line Faults and Overloads** affected the largest number of electric customers as a result of electric transmission outages.

Electric Customers Disrupted by NERC-Reported Electric Transmission Outages by Cause (1992–2009)

Data Source: NERC

Number of NERC-Reported Electric Transmission Outages by Cause (1992–2009)

Data Source: NERC

Electric Distribution

Electric Utility Reported Power Outages by Month (2008–2013)

Data Source: Eaton

- › Between 2008 and 2013, the greatest number of electric outages in Alaska has occurred during the month of **November**.
- › The leading cause of electric outages in Alaska during 2008 to 2013 was **Weather/Falling Trees**.
- › On average, the number of people affected annually by electric outages during 2008 to 2013 in Alaska was **39,282**.
- › The average duration of electric outages in Alaska during 2008 to 2013 was **1,860 minutes or 31.0 hours a year**.

Causes of Electric-Utility Reported Outages (2008–2013)

Data Source: Eaton

Utility Outage Data (2008–2013)

Data Source: Eaton

› NOTE: # of Incidents – The number within each pie slice is the number of event incidents attributable to each cause.

PETROLEUM

Petroleum Infrastructure Overview

Refineries: 6 (4% total U.S.)
 Terminals: 72 (4% total U.S.)
 Crude Pipelines: 1,476 Miles (3% total U.S.)
 Product Pipelines: 7,800 Miles (1% total U.S.)
 Bio-Refineries (Ethanol): 0 (0% total U.S.)

Petroleum Transport

Top Events Affecting Petroleum Transport by Truck and Rail (1986–2014)

Data Source: DOT PHMSA

The leading event type affecting the **transport of petroleum product by rail and truck** in Alaska during 1986 to 2014 was **Derailment/Rollover** for rail transport and **Collision/Rollover** for truck transport, with an average **0.6 and 0.6 incidents** per year (or one incident every 1.6 and 1.6 years), respectively.

Top Events Affecting Crude Oil and Refined Product Pipelines in Alaska (1986–2014)

Data Source: DOT PHMSA

The leading event type affecting **crude oil pipeline and petroleum product pipelines** in Alaska during 1986 to 2014 was **Miscellaneous/Unknown** for crude oil pipelines and **Outside Forces** for product pipelines, with an average **0.31 and 0.03 incidents** per year (or one incident every 3.2 and 29 years), respectively.

Petroleum Refinery

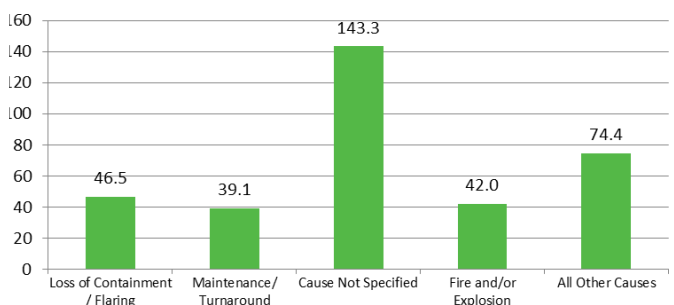

The leading cause of petroleum refinery disruptions in Alaska from 2003 to 2014 was **Loss of Containment/Flaring**. Alaska's petroleum refineries experienced **30 major incidents** from 2003 to 2014. The average production impact from disruptions of Alaska's refineries from 2003 to 2014 is **61.2 thousand barrels per day**.

Top-Five Causes of Petroleum Refinery Disruptions in Alaska (2003–2014)

Data Source: DOE OE

Average Production Impact (thousand barrels per day) from Petroleum Refinery Outages in Alaska (2003–2014)

Data Source: DOE OE

NATURAL GAS

Natural Gas Infrastructure Overview

Gas Wells: 152 (<1% total U.S.)
Processing Plants: 0 (0% total U.S.)
Storage Fields: 1 (<1% total U.S.)
Interstate Pipelines: 4,800 Miles (1% total U.S.)
Local Distribution Companies: 2 (<1% total U.S.)

Natural Gas Transport

- › The leading event type affecting natural gas transmission and distribution pipelines in Alaska during 1986 to 2014 was **Outside Force** for Transmission Pipelines and **Natural Forces** for Distribution Pipelines, with an average **0.16 (or one incident every 6.2 years)** and **1.65 incidents** per year, respectively.

Top Events Affecting Natural Gas Transmission and Distribution in Alaska (1986–2014)

Notes

- › Natural Hazard, Other, includes extreme weather events such as astronomical low tide, dense smoke, frost/freeze, and rip currents.
- › Each incident type is an assembly of similar causes reported in the data source. Explanations for the indescribable incident types are below.
 - › Outside Force refers to pipeline failures due to vehicular accident, sabotage, or vandalism.
 - › Natural Forces refers to damage that occurs as a result of naturally occurring events (e.g., earth movements, flooding, high winds, etc.)
 - › Miscellaneous/Unknown includes releases or failures resulting from any other cause not listed or of an unknowable nature.
 - › Overdemand refers to outages that occur when the demand for electricity is greater than the supply, causing forced curtailment.
- › Number (#) of Incidents – The number within each pie chart piece is the number of outages attributable to each cause.

Bcf – Billion Cubic Feet

GW – Gigawatt

kV – Kilovolt

Mbarrels – Thousand Barrels

Mbpd – Thousand Barrels per Day

MMcfd – Million Cubic Feet per Day

MSTN – Thousand Short Tons

TWh – Terawatt hours
