

United States Department of Energy

# Secretary's Achievement Award

Presented to

## The Office of Science's Energy Sciences Building (ESB) Project

The ESB project team successfully delivered a new laboratory facility to advance the DOE and ANL mission to create technology that will transform the energy basis of the nation's economy. Research conducted at ESB will have a lasting impact on how the nation will consume and conserve energy. The \$95.96M project provides ANL with a state-of-the-art, high-performance laboratory and office building, including flexible laboratory space that can be reconfigured to accommodate changing research projects over the facility life cycle. In addition to achieving a LEED Gold certification, ESB also received the American Council of Engineering Companies Engineering in Excellence Award; a Chicago Building Congress Merit Award; and the Concrete Reinforcing Steel Institute Award for Excellence in Design. The success of the ESB project is credited to the experienced and dedicated project management team, robust project planning, comprehensive risk management, and timely scrutiny of project performance.
